

# Generative AI

PORTFOLIO OVERVIEW | Q3 2026

# Insight Partners GenAI Portfolio Overview

# Software Engineering

GENERATIVE AI EMBEDDED

[Return to Market Map >](#)

## BROWSER BASED AI CODE GENERATION

Bolt is a browser-based generative AI coding platform from StackBlitz that lets users instantly build, customize, and deploy full-stack apps from natural language prompts. With WebContainers, Bolt offers a zero-setup environment for frontend, backend, database, and deployment—making software creation fast, accessible, and collaborative.

[www.bolt.new](http://www.bolt.new) >

## AI AGENT FOR IT OPS

AI-driven IT operations platform designed to detect, investigate, and resolve IT incidents. By integrating with existing monitoring, change, and topology tools, BigPanda consolidates IT alerts into actionable insights. It offers event correlation, automation, and root cause analysis to reduce noise and improve incident response times.

[www.bigpanda.io](http://www.bigpanda.io) >

## FULL STACK OBSERVABILITY

Lightrun is a developer observability platform that securely injects logs, metrics, and traces in real-time while the process is running. It enables developers to debug monoliths, microservices, K8s, serverless, and more from the IDE. Lightrun requires no source code access and only passes metadata through the server.

[www.lightrun.com](http://www.lightrun.com) >

## AI AGENT FOR SOFTWARE DEVELOPMENT

An AI-powered code intelligence platform that enables developers to search, understand, and automate large codebases across multiple repositories. Sourcegraph's AMP AI agent delivers context-aware, natural language code assistance—helping teams find, fix, and refactor code faster across their entire stack.

[www.sourcegraph.com](http://www.sourcegraph.com) >

## COMMUNITY ENGAGEMENT & MODERATION

SonarSource offers a comprehensive platform for continuous code quality and security. It integrates seamlessly with CI/CD pipelines, providing automated code analysis to detect vulnerabilities, enabling developers to write clean, secure, and maintainable code.

[www.sonarsource.com](http://www.sonarsource.com) >

## ONLINE VIDEO CREATION

Swimm helps engineers quickly and easily ramp up to new codebases, optimizing team productivity, independent work, and time-to-value. Swimm's AI-powered code documentation allows to document complex flows and automatically update and validate them as part of developers' workflows.

[www.swimm.io](http://www.swimm.io) >

# Automation

GENERATIVE AI EMBEDDED

[Return to Market Map >](#)

## **CAMUNDA**

### PROCESS AUTOMATION & WORKFLOW MGMT.

Camunda is a next generation business process management (BPM) platform which allows enterprises to simply orchestrate complex processes that run across different people, systems and devices. With Camunda, businesses can easily manage complex processes, automate repetitive tasks, and increase overall efficiency.

[www.camunda.com](http://www.camunda.com) >

## **pipefy**

### BUSINESS PROCESS MGMT. & AUTOMATION

Pipefy is a shared services automation management platform that connects process and systems used to improve customer service, task management and agile development. It is ideal for managing medium to high complexity business processes.

[www.pipefy.com](http://www.pipefy.com) >

## LEAH

### PROCESS AUTOMATION & WORKFLOW MGMT.

Leah is one of the fastest growing AI based contract management solution providers, helping global corporations across the world. It is an easy to use touchpoint document and contract assembly and lifecycle management solution driven by AI. ContractPod AI has embedded generative AI to launch a virtual legal assistant for their users.

[www.leahai.com](http://www.leahai.com) >

## Flank\*

### AI AGENTS FOR LEGAL TEAMS

Flank is an AI-native automation platform that enhances expert teams' efficiency by autonomously handling complex tasks like document generation, negotiation support, and compliance processing. Seamlessly integrating into workflows, its AI agents leverage proprietary modules and a governance cockpit for secure, deterministic, and scalable automation—eliminating operational bottlenecks.

[www.flank.ai](http://www.flank.ai) >

## PACTUM

### BUSINESS PROCESS MGMT. & AUTOMATION

Pactum is an AI-driven negotiation platform that enables large enterprises to autonomously conduct personalized commercial negotiations with their suppliers at scale. It helps unlock hidden value in procurement by automating contract discussions, enhancing supplier engagement, and delivering measurable savings.

[www.pactum.com](http://www.pactum.com) >

## AI PROTEIN ENGINEERING

Profluent is an AI-first protein engineering company. Their solution generates novel functional proteins in the space of genome editing. Profluent uses its generative models to engineer "protein alternatives" that are functionally equivalent to existing proteins, but divergent to not be covered by any existing IP.

[www.profluent.bio](http://www.profluent.bio) >

## DIGITAL TWINS FOR CLINICAL TRIALS

Unlearn.AI is a biotech AI company that develops a digital twin service for clinical trials. Unlearn brings together a world-class team of experts across pharma, medtech, machine learning, and business who share a vision of using machine learning and biostatistics to improve outcomes of clinical trials. *\*Digital twins enhance healthcare by assessing health risks before a disease manifests its symptoms, according to some experts.*

[www.unlearn.ai](http://www.unlearn.ai) >

# Customer Support

GENERATIVE AI EMBEDDED

[Return to Market Map >](#)

## AI-POWERED DIGITAL WORKPLACE ASSISTANT

Resolve is redefining IT and network operations with an agentic automation and orchestration platform built for the autonomous enterprise. Its platform includes RITA, the agentic assistant for employee self-help, which streamlines support and boosts productivity through intelligent, end-to-end automation, and Jarvis, the AI architect for IT, which accelerates workflow development and empowers teams to build and scale automation faster.

[www.resolve.io](http://www.resolve.io) >

## ACCENT TRANSLATION

Sanas is a speech-to-speech converter that provides real-time accent translation, using deep learning AI powered by an acoustic language model. The tool addresses comprehension challenges between global teams and with customers, by increasing speech clarity and comprehension as well as foreign language fluency.

[www.sanas.ai](http://www.sanas.ai) >

## KNOWLEDGE MANAGEMENT AUTOMATION

Shelf is an advanced knowledge management platform designed to help businesses capture, organize, and share their collective expertise. With its AI-powered search, automated content curation, and easy-to-navigate interface, Shelf empowers teams to efficiently access the information they need, and boost productivity.

[www.shelf.io](http://www.shelf.io) >

## AI AGENTS FOR ENTERPRISE

Wonderful builds enterprise-grade AI agent platforms that help large companies automate customer interactions across voice, chat, and email with seamless, localized natural language understanding, integration into complex systems, and 24/7 support that boosts efficiency and experience. It tackles the persistent gap in effective, culturally tuned customer support solutions for non-English and underserved markets where traditional systems fail.

[www.wonderful.ai](http://www.wonderful.ai) >

# Modern Data Stack

GENERATIVE AI EMBEDDED

[Return to Market Map >](#)

## acceldata

### ENTERPRISE DATA OBSERVABILITY

Acceldata is a data observability and optimization platform that empowers businesses to monitor, manage, and improve their data infrastructure performance. By providing real-time insights and actionable recommendations, Acceldata enables orgs to enhance data reliability, reduce operational costs, and accelerate time-to-value, driving better decision-making and competitive advantage.

[www.acceldatao.com](http://www.acceldatao.com) >

## atlan

### DATA CATALOG

Atlan serves as the hub for a data team. The platform sits on top of a company's data infrastructure and acts as a single source of truth for data assets. Atlan is developing a generative AI tool to produce real-time insights and recommendations into an environment's data to assist data teams in all aspects of data management.

[www.atlan.com](http://www.atlan.com) >

### HYBRID CLOUD MANAGEMENT

CloudBolt is a hybrid cloud management platform enabling IT companies to configure and manage private and public cloud resources. It offers a cloud-based platform that enables organizations to measure and control the consumption of computing resources by integrating on-premise resources and public clouds in a single, intuitive interface.

[www.cloudbolt.io](http://www.cloudbolt.io) >

### AI-BASED PREDICTIVE ANALYTICS

Pecan is an AI-powered predictive analytics platform that simplifies and accelerates the process of building and deploying machine learning models. With its code-free solution, Pecan enables businesses to leverage AI, uncover valuable insights, and make data-driven decisions without the need for extensive technical expertise.

[www.pecan.ai](http://www.pecan.ai) >

# GTM & Customer Experience

GENERATIVE AI EMBEDDED

[Return to Market Map >](#)

## REVENUE INTELLIGENCE PLATFORM

6sense is a comprehensive account-based orchestration platform to power sales and marketing. The platform provides omnichannel connectivity and customer insights such as anonymous website activity, buyer intent data and predictive analytics. 6sense uses AI to offer insights and recommendations to sales teams on their prospect accounts.

[www.6sense.com](http://www.6sense.com) >

## DIGITAL EXPERIENCE OPTIMIZATION PLATFORM

Optimizely is a digital experience platform that combines best-in-class content management and robust commerce, powered by AI-backed data and personalization tools that enable organizations to develop greater customer lifetime value, grow brand affinity and increase revenue.

[www.optimizely.com](http://www.optimizely.com) >

## AI OPS FOR FINANCIAL ADVISORS

Jump delivers an AI Operating System purpose-built for financial advisory firms, automating the full client lifecycle—meeting preparation, notetaking, CRM updates, compliance documentation, and follow-up workflows—for RIAs, broker-dealers, and enterprise wealth management teams. Its three integrated products—Meet, Grow, and Operate—convert every client conversation, document, and email into structured intelligence and automated actions.

[www.jump.ai](http://www.jump.ai) >

## DIGITAL EXPERIENCE ANALYTICS

QuantumMetric is a digital experience analytics platform that helps businesses optimize their websites and applications, drive customer engagement, and increase revenue. QuantumMetric provides actionable insights into user behavior, identifies opportunities for improvement, and enables organizations to make data-driven decisions that enhance the overall customer experience.

[www.quantummetric.com](http://www.quantummetric.com) >

## AI AGENT FOR REVENUE OPERATIONS

Sweep is a Salesforce configuration tool to easily create and manage customer funnels. The platform is intended for building out 10s of funnels across their customer segments with demands to have analytics, orchestration and permissions ingrained into the workflows.

[www.sweep.io](http://www.sweep.io) >

# Smart Cities & Industry 5.0 1/2

GENERATIVE AI EMBEDDED

[Return to Market Map >](#)

## FIELD SERVICE AUTOMATION

Aquant is the only agentic AI platform built for organizations that service complex equipment. By combining domain expertise with intelligent agents, Aquant delivers expert-level answers tailored to every task, user, and machine. The platform applies service data and institutional knowledge to improve troubleshooting, speed training, cut costs, and transform the service department into a revenue driver.

[www.aquant.ai](http://www.aquant.ai) >

## PREDICTIVE MAINTENANCE

Augury provides AI-based predictive maintenance and continuous monitoring for industrial machinery. It allows manufacturers to efficiently catch breakdowns before they occur, preventing costly downtime and extensive repairs. The platform automatically diagnoses machines based on the sounds that they make.

[www.augury.com](http://www.augury.com) >

## DIGITAL TWIN AND SIMULATION SOFTWARE

Cosmo Tech SAS provides software solutions and services to cities, the pharmaceutical industry, logistics, and security in the field of urban planning, bioproduction control, in silico drug development, emergency responses preparation, and critical systems robustness assessment. It is a global technology company that helps the C suite make optimal business decisions.

[www.cosmotech.com](http://www.cosmotech.com) >

## AI AGENT FOR DISTRIBUTORS

Instalily is a New York based AI company that builds autonomous agents to streamline complex B2B operations. Its flagship platform, Lily, automates workflows and decisions across sales, service, and supply chain by integrating seamlessly with enterprise systems.

[www.instalily.ai](http://www.instalily.ai) >

## INDUSTRIAL DATAOPS PLATFORM

Litmus offers an Industrial DataOps platform that enables manufacturers to collect, analyze, and integrate real-time data from industrial assets. It enhances operational efficiency by providing seamless edge-to-cloud connectivity, facilitating predictive maintenance, and enabling AI-driven decision-making.

[www.litmus.io](http://www.litmus.io) >

## DIGITAL TWINS FOR SUPPLY CHAIN

Lyric is transforming supply chain operations through its flagship platform, Lyric Studio. Designed to address the limitations of traditional supply chain tools, Lyric Studio offers a composable, four-layered architecture encompassing data integration, algorithmic intelligence, customizable workflows, and user-friendly applications.

[www.lyric.tech](http://www.lyric.tech) >

# Smart Cities & Industry 5.0 2/2

GENERATIVE AI EMBEDDED

[Return to Market Map >](#)

## LOW/NO-CODE APPLICATION

Tulip Interfaces is the leading low-code/no-code application development platform for manufacturers. The business is the runaway favorite for forward-thinking manufacturers of all shapes and sizes looking to scale their workforce and build adaptable production systems.

[www.tulip.co](http://www.tulip.co) >

## Abnormal

### AI EMAIL SECURITY

Abnormal leverages advanced AI to model human behavior, delivering automated protection against sophisticated email attacks and account takeovers, ensuring enterprises' safety without disrupting operations. Abnormal AI analyzes over 45,000 signals to detect anomalies that deviate from baselines.

[www.abnormalsecurity.com](http://www.abnormalsecurity.com) >

## Checkmarx

### APPLICATION SECURITY

Checkmarx identifies, fixes and blocks security vulnerabilities in web and mobile apps. It provides an effective way to introduce security into Software Development Lifecycles, which systematically eliminates software risk before apps are released. Having launched a GPT-4 powered AppSec platform, it provides AppSec teams with AI Query builders and guided remediation.

[www.checkmarx.com](http://www.checkmarx.com) >

## Command Zero

### CYBERSECURITY INVESTIGATIONS

Command Zero platform is in the incident response and investigation space, specifically in automating breach management from investigation through detection, response, remediation, and review of changes (in perpetuity). The company's sweet spot is to automate the process than hiring large "boots on the ground" services experts. This also addresses the talent shortage and inability for incident response companies to keep up with the number of breach requests.

[www.cmdzero.com](http://www.cmdzero.com) >

## DoControl.

### SAAS SECURITY / SAAS DATA SECURITY

DoControl is a SaaS security platform that helps organizations to monitor and control how and by whom data inside of SaaS apps is being shared and used, and enables security teams to build automated remediation workflows where unauthorized or malicious activity is identified.

[www.docontrol.io](http://www.docontrol.io) >

## MATE

### AI SOC AGENTS

Mate Security elevates security operations by embedding organizational and industry intelligence into alert investigations, enabling teams to reduce noise, improve response accuracy, and enhance analyst effectiveness. It addresses the inefficiency of traditional SOC automation, which often fails under dynamic conditions, by providing a continuously learning system that captures tribal knowledge and adapts in real time to evolving security environments.

[www.mate.security](http://www.mate.security) >

## SentinelOne™

### AI-POWERED XDR PLATFORM

SentinelOne is an AI-powered cybersecurity company at the forefront of autonomous threat detection and prevention. SentinelOne has embedded generative AI to allow users to prompt with threat and adversary-hunting questions and receive operational commands to run their environment.

[www.sentinelone.com](http://www.sentinelone.com) >

## sysdig

### CONTAINER SECURITY

Sysdig is a container intelligence and cloud-native application protection platform (CNAPP) that delivers monitoring, security, and troubleshooting in a micro services friendly architecture used by developers, administrators, and other IT professionals. Sysdig is developing on their platform new generative AI features to up-level security teams and further secure the cloud software development process.

[www.sysdig.com](http://www.sysdig.com) >

## torq

### HYPERAUTOMATION FOR SOC TEAMS

Torq's no-code automation modernizes how security & operations teams work with easy workflow building, limitless integrations and numerous pre-built templates. Torq has introduced a hyperautomation platform helping organizations automate the entirety of workflows and processes, and offering GPT-powered analytics capabilities for cybersecurity incidents, strategic responses and defensive measures.

[www.torq.io](http://www.torq.io) >

# AI Agent Infrastructure

GENERATIVE AI TOOLING

[Return to Market Map >](#)

## AGENTIC ORCHESTRATION

CrewAI helps companies streamline workflows across industries with powerful AI agents that support complex use cases, their platform enables companies to plan, build, deploy and monitor automated workflows using any LLMs.

[www.crewai.io](http://www.crewai.io) >

## SANDBOX FOR AGENTS & AI GENERATED CODE

An open-source runtime and cloud environment that enables developers to build, deploy, and run AI agents and workflows at scale—providing fast, secure, serverless infrastructure that enhances automation and code quality for agent-based applications.

[www.e2b.dev](http://www.e2b.dev) >

## AGENTIC WEB BROWSER

Tavily provides a search engine tailored for AI agents and large language models (LLMs), specializing in Retrieval-Augmented Generation (RAG) tasks. It helps developers reduce hallucinations and improve AI decision-making by delivering structured, high-quality results from multiple sources, ensuring reliable and contextually relevant content.

[www.tavily.com](http://www.tavily.com) >

## ENTERPRISE ORCHESTRATION & LOW-CODE AI AGENTS

Workato enables organizations to streamline processes, reduce manual tasks, and improve efficiency by connecting applications like CRM, ERP, and HR systems. Workato's platform offers powerful features, including a visual drag-and-drop interface, pre-built connectors, and customizable automation recipes.

[www.workato.com](http://www.workato.com) >

# Model Security

GENERATIVE AI TOOLING

[Return to Market Map >](#)

## SOFTWARE SUPPLY CHAIN SECURITY

Cycode secures DevOps pipelines and provides full visibility into enterprise development infrastructure. Cycode's advanced detection capabilities correlate event data and user activity across the SDLC to create contextual insights and automate remediation. Cycode delivers security, governance and pipeline integrity without disrupting developers' velocity.

[www.cycode.com](http://www.cycode.com) >

## AI RED TEAMING AND EVALUATION

An open-source library for test-driven LLM evaluation, enabling developers to red-team prompts, RAGs, and agents, automate quality checks in CI/CD, and defend against vulnerabilities like prompt injections. Supporting all major LLMs and integrating with popular developer tools, Promptfoo ensures reliable, secure, and high-quality AI applications.

[www.promptfoo.dev](http://www.promptfoo.dev) >

## SAAS SECURITY

Reco is a data intelligence company. It automatically analyzes the interactions between users and data across critical SaaS platforms to assess risk, allowing to quickly get control and secure sensitive SaaS data.

[www.recolabs.ai](http://www.recolabs.ai) >

## DATA PRIVACY VAULT

Skyflow is a cloud-based, API-driven data privacy vault solution. Their GPT Privacy Vault is a robust privacy solution that enables organizations to safely and securely leverage the full power of large language models such as GPT.

[www.skyflow.com](http://www.skyflow.com) >

# Data Privacy & Compliance

GENERATIVE AI TOOLING

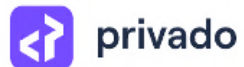

[Return to Market Map >](#)

## onetrust

### WEB-BASED DATA PRIVACY

OneTrust operates a web-based enterprise software platform for data privacy compliance. The company's platform also automates privacy impact assessments and data mapping, identifies privacy risks, enforces risk management, and controls activities. Their Trust Intelligence Platform gives your business visibility, actionable insights, and automation across privacy and data discovery, GRC, ethics, and ESG so you can turn trust from an abstract concept into your competitive advantage.

[www.onetrust.com](http://www.onetrust.com) >

### END-TO-END ENCRYPTED DATA COLLABORATION

Privado helps engineers and privacy teams get instant visibility into personal data usage by their products and apps and find the privacy risks that exists in the code from data leakages. This enables privacy and engineering teams to collaborate, find privacy issues in development, avoid privacy breaches, and win customer trust.

[www.privado.ai](http://www.privado.ai) >

# Model Management

GENERATIVE AI EMBEDDED

[Return to Market Map >](#)

## AGENT OBSERVABILITY

HoneyHive provides AI observability and monitoring solutions that ensure model reliability, performance, and trustworthiness. By offering real-time insights, automated monitoring, and root-cause analysis, it helps teams detect and resolve issues before they impact business operations.

[www.honeyhive.ai](http://www.honeyhive.ai) >

## TASK SPECIFIC MODEL DEVELOPMENT

A specialized architecture for SLMs that is optimized for end devices and does not require GPUs. Fastino runs inference on CPUs, reducing the computational load, cost, and parameter size needed to achieve comparable accuracy to traditional LLMs.

[www.fastino.ai](http://www.fastino.ai) >

## ML MODEL PERFORMANCE MANAGEMENT

Fiddler is a machine learning model performance management, explainability and monitoring solution. It provides continuous visibility into training and production of ML models, allowing organizations to understand why predictions are made, and giving teams insights to improve their models.

[www.fiddler.ai](http://www.fiddler.ai) >

## MLOPS

Landing AI, an end-to-end no-code ML platform that provides deployment ready AI solutions to generate practical AI value for companies. The company has developed a visual prompting model based on generative AI to accelerate the development of computer vision applications.

[www.landing.ai](http://www.landing.ai) >

## LOW CODE LLM APP BUILDER

Relevance.ai allows you to take GPT to the next level and build end-to-end custom LLM apps and agents that you can share, use and run in bulk. Fully managed, low-code and developer friendly.

[www.relevanceai.com](http://www.relevanceai.com) >

## IMAGE AND VIDEO AI INFERENCE

Runware offers a lightning-fast, cost-effective generative media API that enables developers to integrate AI-powered image generation into applications effortlessly. Serving businesses across industries, it delivers high-quality visuals at sub-second speeds without the need for specialized infrastructure.

[www.runware.ai](http://www.runware.ai) >

# Data Management 1/2

GENERATIVE AI EMBEDDED

[Return to Market Map >](#)

## ASTRONOMER

### MODERN DATA ORCHESTRATION

Astronomer offers a managed Apache Airflow platform that streamlines data orchestration and integration for businesses. By simplifying data pipeline management, Astronomer enables organizations to save time, reduce complexity, and focus on generating valuable insights. This leads to accelerated innovation, improved efficiency, and a solid foundation for data-driven decision making.

[www.astronomer.io](http://www.astronomer.io) >

### PROCESS AUTOMATION & WORKFLOW MGMT

Databricks helps companies unify their data, analytics, and AI. Databricks has launched a generative AI model that charges chatbots, text summarizers and search engines for companies to train models using their own data. Databricks have integrated MosaicML, a generative AI platform that allows enterprises to build their own AI models with ownership and data privacy.

[www.databricks.com](http://www.databricks.com) >

### CONTROL PLANE FOR KUBERNETES

Mirantis is a cloud computing company that specializes in Kubernetes and OpenStack solutions, offering enterprises infrastructure management tools for deploying and scaling cloud-native applications. Its platform provides container orchestration, multi-cloud management, and automated operations for both on-premises and cloud environments.

[www.mirantis.com](http://www.mirantis.com) >

### DATA TRANSFORMATION

Prophecy is a next-gen data engineering platform that helps enterprises migrate from legacy to open-source and helps data engineers and data analysts transform and leverage data. Prophecy now offers a platform for enterprises to create their own GenAI apps with their own data, and an AI assistant to automate data pipeline creation and performance improvement based on natural language prompts.

[www.prophecy.io](http://www.prophecy.io) >

### AUTONOMOUS KUBERNETES RESOURCE OPTIMIZATION

ScaleOps is a real-time Kubernetes resource optimization platform that continuously rightsizes pods, automates scaling, and manages GPU allocation for DevOps and FinOps teams across EKS, GKE, AKS, OpenShift, and air-gapped environments. Organizations running Kubernetes at scale face a persistent over-provisioning cycle that wastes 60-80% of cloud compute on idle resources while manual tuning fails to keep pace with dynamic workload demand.

[www.scaleops.com](http://www.scaleops.com) >

### DISTRIBUTED SQL DATABASE

SingleStore helps businesses accelerate digital innovation by operationalizing all data through a single platform. These capabilities are provided in AWS, Azure and GCP and through their own deployments including SingleStoreDB. Singlestore is leveraging generative AI to supercharge real-time analytics withing the SingleStoreDB database.

[www.singlestore.com](http://www.singlestore.com) >

# Data Management 2/2

GENERATIVE AI EMBEDDED

[Return to Market Map >](#)

## SYNTHETIC DATA PLATFORM

Tonic is a synthetic data platform for structured data. Tonic can take a dataset containing sensitive PII and generate a synthetic clone of that dataset that has no PII and that can be used for QA testing, ML models, and general analytics, without compromising data protection.

[www.tonic.ai](http://www.tonic.ai) >

## AUDIO INTELLIGENCE PLATFORM

AssemblyAI automatically converts audio and video files and live audio streams to text with AssemblyAI's Speech-to-Text APIs. AssemblyAI's Audio Intelligence allows summarization, content moderation, topic detection, and more. Powered by cutting-edge AI models.

[www.assemblyai.com](http://www.assemblyai.com) >

## AI DUBBING PLATFORM

A technology company that specializes in AI-driven dubbing and voice-over solutions for the media and entertainment industry. It offers end-to-end localization services, including text-to-speech, speech-to-speech, and voice cloning technologies. Traditional dubbing processes are time-consuming and expensive. Deepdub addresses these challenges by leveraging AI to provide faster, cost-effective, and scalable dubbing solutions that maintain high-quality output.

[www.deepdub.ai](http://www.deepdub.ai) >

## AI MEDICAL RECORD PLATFORM

DigitalOwl is an early AI/NLP platform for medical record summarization and analysis targeting the insurance and legal verticals. Their technology automates the very slow, inaccurate, and expensive process to read and summarize scanned medical records.

[www.digitalowl.com](http://www.digitalowl.com) >

## BUSINESS INTELLIGENCE PLATFORM

Golden Analytics provides an AI-native BI platform for data teams, business users, and data leaders. It connects to warehouses and files, profiles datasets, surfaces patterns, prepares data, builds charts, creates dashboards, and turns analysis into shareable narratives while keeping metrics governed.

[www.goldenanalytics.com](http://www.goldenanalytics.com) >

## AI CONTENT CREATOR

Jasper AI is a powerful and versatile AI Content Generator to help streamline workflows. With Jasper, users can generate social media content, advertising copy, emails, and SEO-optimized articles up to 10 times faster and in as many as 25 languages, including English, Japanese, and Spanish.

[www.jasper.ai](http://www.jasper.ai) >

## IMAGE & VIDEO EDITING

Lightricks is a mobile photo and video editing tool. The company has leveraged generative AI to allow users to create AI-generated photos and videos with simple text prompts.

[www.lightricks.com](http://www.lightricks.com) >

## AI-DRIVEN PERSONALIZED SALES OUTREACH

Mutiny is the AI platform that helps sales teams close more revenue by streamlining the non-selling work with agents and helping reps build stronger customer relationships through personalization at scale. It automates the highest-leverage workflows across sales and marketing: automating prep and personalized follow-up for every customer meeting (assets included), running personalized outbound and ABM campaigns at scale, and inspecting a rep's forecast and coaching them on the deals that matter.

[www.mutinyhq.com](http://www.mutinyhq.com) >

## AI AGENT FOR RFP GENERATION

Rohirrim is a domain-aware generative AI platform that automates the entire RFP response and proposal drafting process. Rohirrim leverages proprietary data ingestion technology to train fine-tuned models based on each customer's past proposals, engineering notes, white papers, etc., automatically weighing documents' relevance in the training process based on RFP-specific quality metrics like win rates, number of collaborators/comments, and stage

[www.rohirrim.ai](http://www.rohirrim.ai) >

## ENTERPRISE AI AND LOW-CODE AGENTS

Writer is an enterprise-grade AI platform built specifically for business environments, with architecture designed for isolation, governance, and auditability rather than retrofitted consumer technology. The platform supports both structured, rule-based workflows and dynamic agentic processes, allowing organizations to automate repeatable tasks while enabling more autonomous AI-driven work.

[www.writer.com](http://www.writer.com) >
